

TheGigRig Cinco Cinco/ MIDI Cinco Cinco

Thank you for purchasing TheGigRig Cinco Cinco 5 IN 5 OUT Mini Patch Bay

The Cinco Cinco is a very simple way to keep all your off-board connections to your pedalboard in one convenient location. Each 1/4" jack can be used as either mono or stereo (via TRS cable) and is completely isolated.

Use it to connect your guitar, amps, amp channel switches and amp's effects loop - basically anything you like.

In the above example you can see how I'm using 4 mono connections to connect the Guitar input, Amp1, Amp2 and Amp's Remote Switch to G2. The 'Amp FX loop connect' is done using a TRS (stereo) cable.

Each connection is completely isolated so there is no risk of earth/ground loops using TheGigRig Cinco Cinco

MIDI CINCO CINCO

The MIDI Cinco Cinco features an additional through connect for a standard 5 pin din MIDI cable. This is ideal if you are using G2 with a midi device that is off the pedalboard. This is a straight thru passive connection.

Your Cinco Cinco is fully guaranteed for 1 year.

This guarantee does not cover 'physical abuse'.

Small Print:

TheGigRig LTD will not accept liability for damage or injury caused by any use or misuse of this product or from damage or injury caused by any equipment used in conjunction or connected to this Cinco Cinco product. No compensation can be claimed for loss of signal before or within any performance.

Specification:

TheGigRig Cinco Cinco is a passive device and requires no power.
Each connection is isolated and can be used as either mono or stereo via TRS 1/4" connections

CE Approved. Fully compliant with RoHSv (lead free product.)
