THREE2ONE V2 INTELLIGENT INPUT SELECTOR

TheGigRig Three2One V2

TheGigRig Three2One V2 is our next generation intelligent input selector. Switch effortlessly between three inputs, balance the signals between those three inputs and send your signal from the main output to an auxiliary output for silent on-stage tuning.

Connections/Controls

Inputs: Plug your guitars in here. Three2One will accept a massive range of input signals from passive to active pickups.

Gain Controls: Each gain control corresponds to an input. Remember that the preamp must be selected.

Preamp Select: Selects either PREAMP MODE or TRUE BYPASS.

Tuner Out: Connect to your tuner.

Main Output: Connect to your pedalboard or amp.

In Operation

Input Selection: Three2One detects when there is a connection to an input. (**Please note** if you don't have anything plugged in, no LED's will illuminate). If you have guitars plugged into inputs 1&3, Three2One will toggle between those inputs, or any other combination of the three inputs. Pressing the footswitch will toggle between all the connected inputs.

Tuner Selection: Sending your signal to the tuner out is simply a matter of holding the footswitch down for 2 seconds. Note that as soon as you press the footswitch the signal is sent to the tuner so you don't have to wait 2 seconds to tune, but after 2 seconds you can take your foot off the footswitch without toggling between inputs. To exit tuner mode, tap the footswitch to send the signal to the output

Preamp Selection: Each input has a dedicated selectable preamp so you can balance the signal level between all 3 inputs. Press the Preamp Select button to turn the preamp on, then use the gain control to select the level. Do this for any/all of the three inputs where you wish to alter the level of the guitar

Thank You

By buying this GigRig product you are supporting a small team of ridiculously talented engineers, tech advisers, production heroes, admin legends and their families. If you need anything, please contact us through our support page at thegigrig.com/support and don't forget to check out our YouTube channel for more info.

Technical Specifications:

Input Voltage: 9Vdc 2.1mm centre negative

Current Draw: 150mA@ 9Vdc

Input is reverse diode protected

Safety: The GigRig Three2One is designed for indoor use only - Don't get them wet

Warranty:

The GigRig warrants the product to be free from defects in material and workmanship for a period of 2 years from the original date of purchase. If the product fails within the warranty period, The GigRig will repair or, at our discretion, replace the product and cover the cost of return shipping to the original purchaser. This warranty covers defects in manufacturing discovered while using this product as recommended by The GigRig. This warranty does not cover loss or theft, nor does the coverage extend to damage caused by misuse, abuse, unauthorized modification, improper storage, lightning, or natural disasters. Damage caused by any of the above circumstances may result in a non-warranty repair fee

Legal:

In the case of malfunction, the purchaser's sole recourse shall be repair or replacement, as described in the preceding paragraphs. The GigRig will not be held liable to any party for damages that result from the failure of this product. Damages excluded include, but are not limited to, the following: lost profits, lost savings, damage to other equipment, and incidental or consequential damages arising from the use, or inability to use this product. In no event will The GigRig be liable for more than the amount of the purchase price, not to exceed the current retail price of the product. The GigRig disclaims any other warranties, express or implied. By using the product, the user accepts all terms herein.

Disposal:

Return the unit to The GigRig Ltd for disposal or use standard disposal for electrical equipment recommended in your country

UK CA CE Approved. Fully compliant with the RoHS√ standard.
